

Each team will need 4 people and 3 teams in total.

The first team will take rest on the other hand.

The second team will have to defend the third team from winning.

The third team to win needs to successfully make around without being caught by the defender's team (second team).

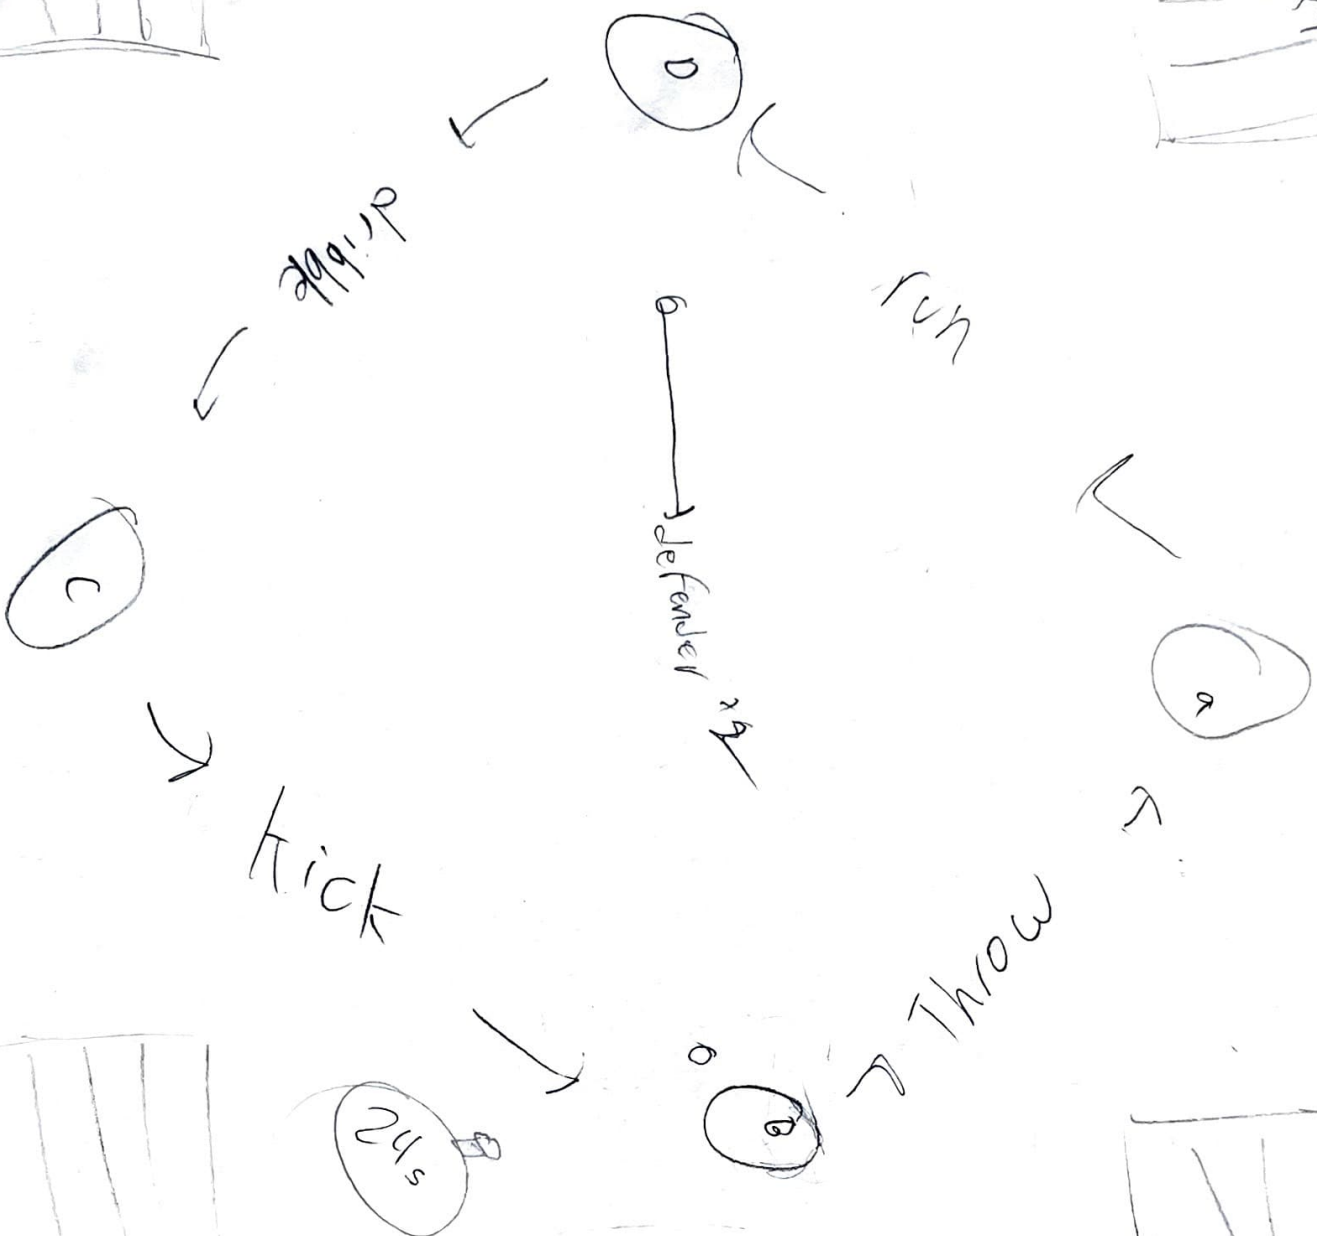

In the third team they have 4 positions to be in, each have a role to get to the other position or place which is marked with a circle.

The time limit to get to the circle is 24 seconds;

if they get there before 24s and don't get caught the game continues, if they get caught they go to prison.

But if they don't get caught but neither do they arrive at the third circle in time both team defender and team need to go to prison. (only the player)

The players can only get out of prison if the person on their same team comes too, (from the same position).
