

Title: Game Design Project Portfolio

Name: James

Date: 3/22/2025

Introduction: The purpose of my project is to design a game that combines soccer and basketball.

Objectives: The main goal of my project is to include rules and skills that apply in both soccer and basketball. In addition after looking at the results of my questionnaire, the game will require both arms and legs and will be held outdoors.

Target Audience: Students at WUIS.

1-Explain and justify the need: Design a game which includes both soccer and basketball for PE classes.

2-Identify and prioritize the research: I did my research based on my questionnaire. Most people wanted to play the game using thier hands and feet. Some wanted to play outdoor and others wanted to play indoors. Based on this I made my game outdoors. It is played with hands and feet only.

3-Develop a design brief: My game contains all the rules that basketball and soccer have. The main rule is

to shoot with hands.
